1 October 2007

To Whom it May Concern:

This is to certify that all acrylic louvers and molded lenses currently produced and supplied by SLP LIGHTING are manufactured from 100% virgin acrylic resins identified as Arkema V, VM or Cyro H15, M40 and ZK-M.

Letters we have on file from our suppliers of these resins allow us to make the following statements:

All acrylic resins used in the manufacturing of our louvers and molded lenses meet the requirements for approved plastic materials specified in paragraph 2. a (... "burn no faster than 2.5" inches per minute in sheets 0.050" in thickness when tested in accordance with ASTM D-635-68" ...) and paragraph 2.b (... "have smoke density rating not over 75 when tested in the thickness intended for use in accordance with ASTM D-2843-70" ...).

Sincerely yours,  
SLP LIGHTING

Michael Bush
