

PATTERN 15

EXTRUDED LENS

PR15

3/8" - 9,5mm FEMALE PRISM

SLP's extruded Prismatic Pattern 15 is designed specifically to span large openings without any objectionable sag. The 3/8" (9,5mm) square based female prisms not only provide structural rigidity but also offer an orderly appearance. PR15 is the only lens for large openings that offers high efficiencies, controlled luminance and rigidity. With a light transmission of approx. 83%. The prisms are oriented perpendicular to the width and length. Parts with a diagonal prism orientation are available on request. Please contact factory for availability.
